NUTANIX™ Hewlett Packard Enterprise

THE POWER OF
CHOICE

CONSUME PRIVATE CLOUD
YOUR WAY

Award-winning Nutanix enterprise cloud software OS is now available on world-class HPE ProLiant DX hardware, enabling you to lower total cost of ownership (TCO), simplify operations, and deliver secure data efficiency at scale. All on your own terms.

This hyperconverged infrastructure (HCI) offering from HPE and Nutanix brings the power of choice. It enables businesses to more economically and confidently run their critical applications at scale than with traditional SAN-based infrastructure or more constrained HCI vendors.

Configurations can either be purchased upfront as an HPE ProLiant DX integrated system, or as a pay-as-you-go consumption model through HPE GreenLake. Customers also get the freedom to use the built-in, license free Nutanix AHV hypervisor or the VMware ESXi or Microsoft Hyper-V hypervisors.

HPE ProLiant DX integrated fully tested systems are available in multiple workload tailored configurations for storage, I/O and compute needs. HPE customers can leverage Nutanix solutions to build an enterprise cloud – delivering the simplicity and agility of public-cloud services, with the control and security needed in private-cloud environments. Deployments are fully supported by HPE for hardware, and Nutanix™ for the software, covering the entire IT lifecycle from initial installation, infrastructure upgrades, scaling and troubleshooting.

THE POWER OF **CHOICE**

NUTANIX™   Hewlett Packard Enterprise

Nutanix™ Enterprise Cloud OS software integrated with HPE ProLiant DX Systems

Gain cloud-like agility and ease of use

Easily scale out your HPE infrastructure as needs increase

Simplify management of your HPE and Nutanix infrastructure with one-click updates for BIOS, firmware and software

Protect your system security and ensure maximum uptime with the use of AI and ML tools

Solution benefits:

- **Gain peace of mind** by using the industry's most secure industry standard servers with HPE Silicon Root of Trust firmware protection

- Build on your **fortress of protection** with inside the firewall application protection and constant monitoring for compliance to your specified secure baseline configuration

- Achieve **faster time-to-value:** Nutanix Acropolis OS and AHV software is factory pre-installed on HPE ProLiant DX integrated systems, enabling fast and simple infrastructure deployments

Where a HPE ProLiant DX integrated system can help:

- **Deploy and scale critical database and enterprise applications** such as Microsoft® SQL, Oracle® and SAP® business applications

- **Make Virtual Desktop Infrastructure (VDI)** successful by delivering excellent user performance and predictable scalability without high operational and capital costs

- Proven deployments for popular **Messaging, Collaboration, and Unified Communications (UC)** tools such as Microsoft® Exchange, Microsoft® Teams SharePoint® and Slack

- Data sets easily scale as your **storage and big data** needs grow, enabling better understanding of your customers and operational trends to run your organisation.

NUTANIX™   **Hewlett Packard Enterprise**

Having choice and flexibility in shaping your private cloud infrastructure architecture can not only optimise cost and workload performance, but strengthen your security and governance.
